SUMMARY

MS in Data Analytics Engineering candidate skilled in turning large, messy datasets into business insight with SQL, Python, and Tableau across cloud, geospatial, and time-series analytics projects.

EDUCATION

Northeastern University (Boston, MA)	Expected May 2027
Master of Science in Data Analytics Engineering	
Relevant Coursework: Machine Learning, Computation and Visualization, Data Management	
National Changhua University of Education (Changhua City, Taiwan)	Jan 2025
Bachelor of Business Administration	

TECHNICAL SKILLS

Programming & Query: Python, SQL, R, Claude Code
Data Analytics: Data Cleaning, Feature Engineering, EDA, Statistical Analysis, Time-Series & Geospatial Analysis
Visualization & BI: Tableau, Power BI, Plotly, Matplotlib
Databases & Cloud: MySQL, MongoDB, Relational Database Design, AWS, Azure, GCP

EXPERIENCE

Chunghwa Telecom (Taipei, Taiwan)	Jan 2024 - Jun 2024
<i>Business Analyst Intern, Cloud Team</i>	
- Analyzed usage and traffic data across 3,000+ AWS customer accounts in Excel and Power BI to surface usage trends and service performance, guiding account-management and marketing priorities. - Joined an advertising and marketing project, using Google Analytics and Google Ads to analyze ad-campaign performance and recommend audience targeting and media-spend optimizations. - Conducted cloud market research and presented weekly competitive-intelligence reports on AWS, Azure, and GCP to managers, and took part in industry seminars and partnership events.	

PROJECTS

Multi-Cloud AI Infrastructure Market Analysis Python, BeautifulSoup, Tableau, Plotly	2026
- Collected and cleaned 2M+ raw AWS, Azure, and GCP pricing and infrastructure records into a curated ~12K-record dataset spanning 134 regions, 9 service categories, and 17+ accelerator types. - Built a market-intelligence model comparing service portfolios, AI offerings, GPU pricing, and 6 quarters of market share, surfacing AWS's ecosystem lead, Azure's 57-region footprint, and GCP's growth (11% to 15%). - Delivered 3 interactive Tableau dashboards and 9 visualizations for competitive benchmarking and strategic insights on AI-driven cloud competition.	
U.S. Aerospace Innovation Atlas Python, GeoPandas, Plotly Dash, BigQuery (SQL)	2026
- Built an end-to-end pipeline mapping 16 years (2000-2015) of U.S. aerospace patents (5,200+) across 300+ metro areas, integrating USPTO, U.S. Census, and Google BigQuery sources. - Engineered geographic-concentration (Herfindahl index, top-5 share), shift-share growth, and per-100k metrics via a GeoPandas spatial join of inventor coordinates to metro boundaries; validated results against official USPTO totals. - Shipped an interactive Plotly Dash dashboard (animated choropleth + drill-down) and used BigQuery SQL to split aviation vs. space across 38K+ patents.	
NFL Offensive Performance Analytics Python (pandas), Plotly, Power BI	2025
- Analyzed 4 NFL seasons — ~22.6K player-week records (2021–2024, 600+ players, 32 teams) from nflverse — cleaned and aggregated to 2,345 season-player rows. - Engineered efficiency metrics (EPA, target share, catch %, completion %) across QB/RB/WR/TE to measure value, not just volume. - Built an interactive Plotly dashboard and a Power BI version that pairs volume leaders with efficiency leaders — revealing that top-yardage players are often not the most efficient.
